**Workspot Application Access On A MacBook**

- After you have logged into Workspot and clicked on the application you would like to use it might appear that nothing is happening.
- The application is launching, but it is launching in the background where you cannot see it.
- Once you click on an application wait just a moment as the application connects to the hospital and launches.
- After a moment you can then go to the top of your Desktop and click on the Window tab.
- At the bottom of the dropdown menu you will see the Workspot application and whatever other application you have launched.

- Remember when launching applications like Clinician Hub, GE Workforce, or the CRMC Intranet these applications will be listed as Internet Explorer in the drop down list.
- Once the application appears in the list you can simply click on it and it will bring the application to the front.
- A window will open and your applications will be listed. If you need additional applications that are not listed, please contact us at 931-783-5888.
